

Hanier Peguero

Software Developer

About me

Software Development Technology (ITLA) student with a solid foundation in programming logic, database architecture, and REST API consumption. A highly self-taught and analytical individual with practical experience in creating management systems, configuring user roles, and defining data flows. I seek to contribute my passion for technology and my logical problem-solving skills to support the implementation and optimization of business solutions. I am highly adaptable and can integrate automation tools when projects require it, always focused on adding value and efficiency to the team.

Work Experience

Software Development Intern | TIXO & TIXOLIGHT Project (Abril 2026 - junio 2026)

- Collaborated within a cross-functional team to design, develop, and implement an integrated management system, contributing to the configuration of administrative modules, role-based access control (RBAC), and permission management.
- Designed and maintained the database structure, executed schema migrations, and ensured reliable data persistence and integrity for student records, academic information, and document request workflows.
- Designed and maintained the database schema, managed database migrations, and ensured data integrity and reliable persistence for student records, academic data, and document request workflows.

Academic Projects

Software Developer | Web and cross-platform applications

- I developed backend services and implemented RESTful API integrations using JSON, enabling seamless communication between different system modules.
- Diagnosed and resolved environment configuration and dependency issues, applying strong troubleshooting, debugging, and technical problem-solving skills to maintain development workflows.
- Integrated external data into web and mobile interfaces through API consumption, delivering reliable data synchronization while quickly adapting to new technologies, automation tools, and project requirements.

Professional Training

Software Development Technologist | 2024 (Current)

Instituto Tecnológico de Las Américas (ITLA)

Cisco Networking Academy

CPA: Programming Essentials in C++

IT Essentials

Technical Skills

- **Backend Development & Architecture:** C# (.NET), ASP.NET Core, Entity Framework Core, Clean Architecture, Design Patterns, RESTful API Development & Integration.
- **Frontend & Mobile Development:** React, React Native, Expo, Next.js, HTML5, CSS3, JavaScript.
- **Databases:** SQL Server, MySQL, SQLite, Relational Database Design, Database Migrations, JSON Data Handling.
- **Tools & Platforms:** Git, GitHub, Vercel, Metro Bundler, Environment Configuration.

Core Competencies

- Analytical problem-solving and strong programming logic.
- Troubleshooting and technical issue diagnosis.
- Self-directed learning and research-driven problem solving.
- Clear technical documentation and knowledge sharing.
